☆ 1· 우리나라 유망 산업/기업 설명

One of the rising industries is definitely the movie industry. Korean movies have changed a lot over the years. The biggest change is the use of computer graphics. In the past, the computer graphic technology was not developed that much. Because of that, the viewers could easily notice the use of computer graphics, and it was somewhat awkward and funny. However, these days, there have been massive improvements in the movie industry through the use of computer graphics. For example, ghosts and other imaginary creatures appear to be unbelievably real. Not only that, 3D and 4D films take the movie experience to a whole new level. Some say, because of this, the price of movie tickets has doubled in the last few years. But, I think the price increase is reasonable.

So, once again, I would say that Korean movies have become so much better than the past. And this is why the Korean movie industry has become one of the rising industries.

☆ 2· 그 산업/기업이 우리나라에 주고 있는 이점

As I mentioned earlier, the movie industry is one of the rising industries in Korea. Movies have changed a lot over the years. For example, a lot of Korean actors or actresses started to act in Hollywood. Some directors have already made films/have already made their debuts in Hollywood as well. Also, many Korean movies are being exported overseas now. I heard most Korean dramas or movies are big hits on Netflix among many Asian viewers.

Because of this, the Korean movie market has become one of the largest markets in the world. I have to say that the movie industry brings a lot of benefits for the economy of Korea.

Well, that's it. That's all I remember for now.

☆ 3. 선호하는 회사, 회사가 제공하는 것

People want to work for different types of companies depending on what their priority is. If you think money is important, you should go for high salary jobs. Usually, a heavy workload follows though. However, there are people who work, not only for monetary compensation, but also for other benefits. Some companies provide a lot of benefits for their employees such as child care, education and even bill payment. For me, I chose my job because the company offered financial support to help me finish school. I could feel that they actually cared about their employees. If you want to expand your horizons in the field or build experience, you should choose a job you like. You might not get paid that much though. Overall, people want to work for different types of companies depending on what their priority is.

☆ 4. 커리어를 위한 노력/사람들이 진로를 위해 하는 일

There are various things I've done for my career. For example, I went to college and majored in a certain field to get my degree. I even went to grad school to get my Master's (or PhD).
Getting a job in Korea is very competitive. Because of that, I did an internship at a company while attending school. In fact, improving English was also an important skill for my career. So, I went to a language school overseas and took online courses to prepare for some English tests. Some companies even require certain scores on the tests. Because of this, some people even take private tutoring lessons and pay a lot of money to improve their English skills. So, I had to prepare many things to get into the company. Well, that's it. These are what I have done for my career.
